

ABSTRACT

COMPOSITIONS AND METHODS USING LACTADHERIN OR
VARIANTS THEREOF

10 The present invention relates to novel methods and composition that
can be used in the biological, experimental and medical areas. More
particularly, the invention relates to compositions and methods using
lactadherin or variants thereof, or a corresponding nucleic acid, for regulating
(i.e., inducing, inhibiting, stimulating, etc.) or monitoring an immune response,
more specifically a CTL response, as well as for the delivery of molecules to
15 dendritic cells, in vitro, ex vivo or in vivo.
